### ***Reasons for Allowance***

1. Claims 1,2, 5-7, 9-12 are allowed.

It is noted that the closest prior art of record, Addison et al. (US Patent 6,865,533), teaches the use of a text to speech system where an attempt is made to identify the emotional state of the speaker, but Addison does not teach the more specific case of receiving a block of input text into a text-to-speech synthesizing system; partitioning the block of input text into a plurality of context spaces each containing multiple phrases; performing semantic analysis on each context space in order to identify a topic for each context space; and selecting a speaking style for each context space from a plurality of predefined speaking styles based on the topic identified respective of the context spaces, where each speaking style correlates to prosodic parameters and is associated with one or more anticipated topic. Thus, independent claims 1, 5, and 12 are allowable over the prior art of record because the cited prior art alone or in combination, does not fairly suggest or disclose the claimed combination of features.
